MOVENTRA

Hobby-Based Micro Event Platform

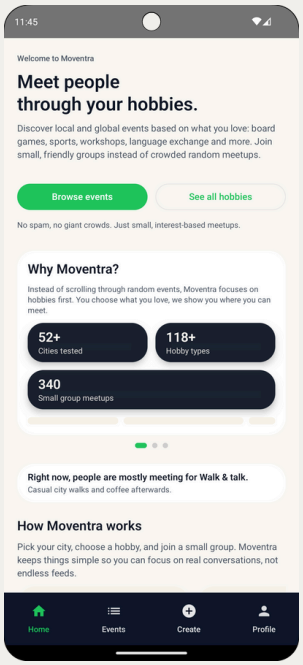
Problem

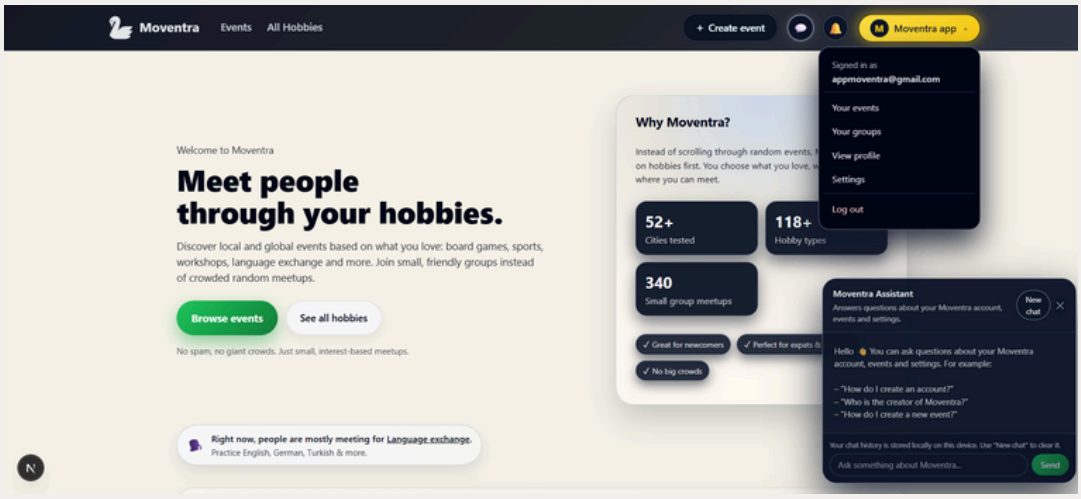
- People who move to a new city struggle to discover small, hobby-based activities.
- Major event platforms promote only large, paid events.
- Micro-events remain invisible, preventing newcomers from building social circles.

Solution

Moventra helps users find small hobby-based activities through smart filtering and AI-assisted recommendations that match their interests. The platform will also provide safety-aware suggestions for outdoor hobbies and highlight fast-filling events based on community patterns. By improving the visibility of micro-events, Moventra helps newcomers build real connections while supporting small businesses without paid advertising.

MVP Screenshots





Moventra is a full-stack event discovery platform built with Next.js (frontend), Express.js (backend), Prisma ORM, and PostgreSQL. It enables users to create small hobby-based events and join local activities in new cities.

Why Now?

- Rising mobility, more newcomers in cities
- Micro-events are invisible on large platforms
- Increasing demand for hobby-based communities

Tech Stack

- Frontend: Next.js, React
- Backend: Node.js (Express)
- Database: Prisma + PostgreSQL
- AI: Deep Learning recommendation logic
- Auth: JWT-based system

Planned Cross-Platform Tech

Mobile: React Native for Android & iOS

Architecture: API-first backend for multi-platform support

Achievements

- Identified a clear market gap through user research
- Developed the Moventra MVP with AI-assisted event matching
- Prepared a scalable architecture for the first user onboarding phase

Supporting Local Communities

Moventra helps small businesses and local organizers reach new audiences without paid ads, increasing participation in workshops and hobby events. As newcomers join these micro-activities, neighborhoods become more active, connected and economically vibrant.

Future Vision

Full integration of deep learning models for personalized event recommendations and dynamic interest matching.
Planned cross-platform expansion with React Native for Android & iOS.
Real-time insights such as safe-time suggestions for outdoor hobbies and fast-filling event alerts.
Growth toward micro-community networks where newcomers, hobby groups and small businesses can easily connect.
